CertMax+

Product information

CertMax + is Certex system used to manage products and equipment that require control, inspection and follow-up, such as slings, shackles, and other lifting equipment.

CertMax + allows companies to maintain a high level of safety in a quick and efficient manner. The system supports identification using RFID (Radio Frequency Identification) of the equipment the company wishes to keep track of. Even identification through the use of barcodes or manual ID number is possible in the system. Also, you have access to CertMax + via any web browser, iPad, iPhone, and Android - around the clock.

Through CertMax + you get access to the status of the equipment - approved or not approved, for example. CertMax + gives you access to the equipment's all reports and certificates. Everything is available online 24 hours a day.

Manuals for use of the registered equipment is also available in the system. With CertMax +, you have access to your documents and certificates through any web browser, iPad, iPhone, Android or PDA. So, no more searching. With the help of an RFID reader, you do not need to enter the ID number by hand, instead you can scan the equipment and quickly obtain the information.

Contact your nearest Certex office for more information on CertMax+.
