

Apex Steel Strapping, Signode

Product information

Signode Apex® is a cold-rolled, low carbon steel strapping. It has been engineered to yield a higher break strength at a thinner gauge than regular-duty steel strapping. In many light to medium-duty applications, Apex® can substitute for the heavier gauge regular-duty steel strapping to save money on material and shipping costs. Apex® is available in two finishes; painted and waxed and zinc coated and waxed. Each is tailored to the requirements of particular tensioning methods, sealing devices and packaging applications.

Material: Steel

Finish: Painted

Part code	MBL	Band width mm	Band thickness mm	Weight kg/100m
