Cardboard Void Filler TOP

Product information

Niupack®Top is the smallest and most versatile model in the innovative Niupack® family of stabilization solutions. Its collapsible honeycomb structure provides exceptional strength, durability and reusability.

It is the ideal solution for filling small spaces between pallets, especially when the load does not occupy the entire perimeter of the pallet (known as suspension). Niupack®Top effectively prevents tilting and swaying of goods, eliminating the risk of instability and domino effect during transport.

The product is widely used in road transport, but also works well in container logistics. It is primarily recommended for food, beverage, consumer goods and non-food products.
