Cardboard Void Filler DOUBLE

Product information

The Niupack® Double is a specialized model designed to secure loose or odd pallets, which are often found in road or container transport. It consists of two honeycomb blocks connected by a central cardboard section, thus providing protection against lateral movement from both sides.

With its larger cells, it acts as a classic Void filler, effectively blocking shifting of goods. This model is perfect for situations where proper weight distribution on the axles and maximum use of space in a container or truck is required.
