Cardboard Void Filler PANEL

Product information

The Niupack® panel is a traditional, sturdy panel constructed of honeycomb and covered with Kraft paper to create a lightweight but extremely strong structure. Ideal for separating and stabilizing reassembled pallets, it protects loads from damage by evenly distributing weight and preventing it from concentrating on the pallet skids.

This model also works well as a side protection when using inflatable bags - it prevents them from rubbing against the sharp edges of pallets, dispersing the pressure in a way that is safe for the goods.

The Niupack® panel is not collapsible, but provides superior durability and effective protection where it is needed most.
